

Agent Readiness Actions for Manufacturers — Discovery Top-Off

For: ELSCO Transformers | From: Liz Micik | ~20–30 minutes

This is the only homework on your side. I've already pulled most of what I need from your website — this form is mostly you confirming my work and filling a handful of details that simply aren't published anywhere I could read them.

Cover note

Hi Todd,

To build your Agent Readiness Actions package, I need a short bit of input. Most of it I've already pulled from elscotransformers.com, so this is mostly confirming what I found and filling a few gaps only your engineering team knows.

Four short parts, about 20–30 minutes:

1. One question to confirm fit
2. Confirm what I pulled from your site (just check my work)
3. Fill the handful of specs that aren't on your site — **this is where your time matters most**
4. Tell me which pages to cover and how you'd like to deploy

Anywhere I've written "**I found:**", I've pre-filled it — just confirm or correct. Reply with this filled in, or we can walk through it live in 20 minutes.

Thanks,
Liz

Part 1 — Are we a fit? (1 question)

How do you quote a typical job?

- ☒ **From parameters** — a customer picks a size/rating/material/options and you quote from that ("1500 kVA, 13800V, dry-type"). ☒ *ELSCO is a great fit — this is exactly the model the package is built for.*

- ☐ From a customer's drawing or BOM — every job defined by a print or parts list. (*Not ELSCO — this is the build-to-print model the package doesn't yet cover.*)

Part 2 — Confirm what I pulled from your site (*just check my work*)

Company basics

- Company name: **I found:** ELSCO Transformers — ☐ correct
- Website: **I found:** elscotransformers.com — ☐ correct
- Service area: **I found:** United States — ☐ correct
- Phone for urgent quotes: **I found:** 800-232-9002 (Quick Response Team) — ☐ correct
- Your existing "request a quote" page: **I found:** elscotransformers.com/request-a-quote/ — ☐ correct

What you can build (your capability envelope) — correct anything wrong, add anything missing:

- Product lines: **I found:** Medium-voltage dry-type transformers; padmount transformers; refurbished/remanufactured transformers — ☐ correct ☐ add: _____
- kVA range: **I found:** 500–2500 kVA — ☐ correct ☐ correct to: _____
- Primary voltages: **I found:** 2400 / 4160 / 12000 / 12470 / 13200 / 13800 / 14400 / 22900 / 24940 / 34400 / 34500 V — ☐ correct ☐ edit: _____
- Secondary voltages: **I found:** 208 / 480 / 2400 / 4160 / 12470 / 13200 / 13800 V — ☐ correct ☐ edit: _____
- Windings & connections: **I found:** Copper or Aluminum; Delta or Wye — ☐ correct
- Lead-time tiers: **I found:** Quick-Ship (24–48h), 30 / 60 / 90 / 180 / 180+ days — ☐ correct
- Services: **I found:** New build, remanufactured/refurbished, emergency replacement, custom bus work, retrofit, repair — ☐ correct ☐ add: _____

Your quote-request fields — what you ask a customer for to quote accurately. I pulled this from your Request-a-Quote form:

kVA rating · product type · windings · primary voltage · primary connection · secondary voltage · secondary connection · delivery timeframe · contact (name, email, phone, company) · attachments (specs/drawings, or nameplate + unit photos for replacements) · comments · emergency flag

- ☐ This list is complete ☐ Add what's missing: _____

Part 3 — The details that aren't on your site (*your time matters most here*)

These seven attributes appear on your spec sheets but **not** on the public 1500 kVA page, so an AI agent can't read them today. They're the gap between a product record an agent *mostly* understands and one it understands completely. They're facts your engineering team knows cold — no research needed:

Attribute	What I need	Your answer
Phase	Single or three-phase (I assumed three-phase)	_____
Windings	Copper or aluminum on this unit	_____
Cooling Class	e.g., AA	_____
Enclosure	NEMA rating (e.g., NEMA 3R)	_____
Impedance	% impedance	_____
Temperature Rise	e.g., 150°C	_____
Design Standards	Confirm: NEMA / ANSI C57 / IEEE — anything to add or remove?	_____

Certifications & standards you hold or build to (company-wide): [e.g., ISO 9001, UL/C-UL, ANSI C57, IEEE, NEMA] — _____

Catalog/model numbers for your standard quick-ship configurations: _____

Which configurations are stocked vs. build-to-order: _____

Warranty terms: I found: 5-year — ☐ correct ☐ correct to: _____

Model-to-model cross-references (this model replaces/supersedes that one — useful for replacement searches): _____

Customer testimonials — I've already pulled three from your site (Mark, Dennis, Bill) and marked them up. Add any others you'd like represented. *Note: I only add star ratings if you actually collect them — I never fabricate ratings.*

- _____

Part 4 — Scope & deployment

Which product pages should the package cover? One structured record is built per page. We started with your highest-traffic spec page; list any others:

1. **Covered in this sample:** /transformers/dry-type-transformers/1500-kva-13800-delta-to-480y-277/

-
- 2.
-
- 3.
-

(More pages = larger package; we confirm scope and price before starting.)

Your highest-value pages — which drive the most revenue or best-fit inquiries? _____

Deployment — how do you want the files installed?

- ☐ **We hand you the files + a plain-English deploy guide**, your web team pastes them in (standard — included).
- ☐ **Done-with-you** — you'd like help wiring the quote-request contract + QA'ing the spec extraction (optional add-on).

Who's your web/dev contact (the person who places the files)? _____

What you'll get back

The package described in your Package Manifest: structured product records, your machine-readable capability envelope, the machine-readable quote-request contract, the agent-discovery files, structured testimonials, and an llms.txt — plus a plain-English deploy guide and a one-page before/after showing exactly what an AI agent can newly understand and do with your site. **You own every file. No backend changes. No subscription.**

Once Part 3 is filled, the seven `PENDING_ELSCO_CONFIRMATION` flags in your files clear and the package is go-live ready.
