

QUICK REFERENCE

Why Use Schema?

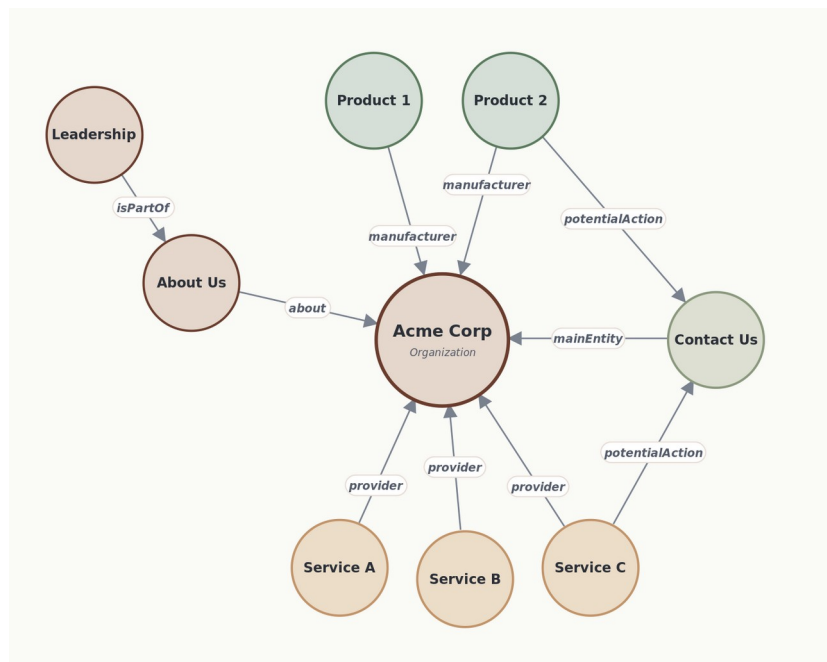

This is not the same schema used for SEO. Our goal is not to earn rich snippets, but to make the entities of a website and their relationships clear for the AI agents reading your site.

dis·am·big·u·a·tion

\ ,dis-am-,bi-gyə-'wā-shən \ **noun.** the act of disambiguating: “to clarify (something ambiguous) especially by providing or considering additional information.”

— Merriam-Webster

```
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "@id": "https://acme.com/#org",
  "name": "Acme Corp",
  "alternateName": [
    "Acme",
    "Acme, Inc."
  ],
  "legalName": "Acme Corporation",
  "url": "https://acme.com",
  "logo": "https://acme.com/...",
  "description": "Acme Corp...",
  "foundingDate": "1972-04-15",
  "founder": { ... },
  "address": { ... },
  "contactPoint": { ... },
  "sameAs": [
    "https://linkedin.com/...",
    "https://facebook.com/...",
    "https://wikidata.org/...",
    "https://crunchbase.com/...",
    "https://x.com/acme..."
  ],
  "knowsAbout": [
    "Manufacturing",
    "Supply Chain",
    "Industrial Distribution"
  ],
  "makesOffer": [...],
  "mentions": [...],
  "subjectOf": [...]
}
```

The Transition Requires Translation

In two years the agents transacting business on your website may not require this level of guidance. For now though, being clear, complete, and consistent in defining the entities on your site and their relationships is your best path to being found, understood and trusted enough to earn mentions and citations.
